

PROFILE

As an AI Developer I focus on creating autonomous agent systems and intelligent applications using LangChain and CrewAI. I architect and deploy robust solutions, from building custom RAG pipelines to serving them as scalable APIs. Passionate about solving complex problems through predictive modeling and generative AI.

SOCIALS & CODE

LinkedIn

GitHub

Portfolio

SKILLS

AI & LLMs

LangChain, CrewAI, RAG, OpenAI API, Gemini, HuggingFace

Machine Learning

Scikit-learn, Pandas, NumPy, Predictive Modeling

Development

Python, Django, FastAPI, REST APIs, Git

Tools

Streamlit, FAISS, VS Code, Jupyter

ABDULLAH TAHIR

AI & ML ENGINEER

WORK EXPERIENCE

Machine Learning Intern (Virtual)

6 Weeks

Developer Hub Corporation

- Completed an intensive virtual internship focused on ML and AI technologies.
- Developed predictive models using Scikit-learn for real-world datasets.
- Collaborated on domain-specific tasks to enhance the AI development lifecycle.

TECHNICAL PROJECTS

> AI Marketing Content Engine

CrewAI, Python, Autonomous Agents

Created a multi-agent system that automates marketing workflows. The agents collaborate to research topics, devise content strategies, and draft SEO-optimized blogs and social media posts autonomously.

[View Project Code / Demo](#)

> AI News Analysis Tool

LangChain, Gemini LLM, FAISS, Streamlit

Built a RAG (Retrieval Augmented Generation) pipeline enabling natural language Q&A over article URLs. Allows users to extract real-time insights from news sources instantly.

[View Project Code / Demo](#)

> Smoking Assistant Chatbot

RAG Pipeline, Python, Vector Database

Developed an intelligent chatbot using RAG technology to provide accurate, context-aware assistance. Leverages vector embeddings to retrieve and synthesize relevant information for user queries.

[View Project Code / Demo](#)

> AI Portfolio Assistant

LangChain, HuggingFace, Python

Developed a personal chatbot trained on my professional resume data using vector embeddings. Deployed live to interactively answer recruiter questions.

[View Project Code / Demo](#)

> Predictive Modeling for House & Stock Prices

Random Forest, Gradient Boosting, Time-Series

Built multiple regression models to forecast real estate and stock market values. Processed and analyzed complex time-series data using Pandas and yfinance.

[View Project Code / Demo](#)

> Resume Analyzer

NLP, Decision Tree Classifier, Tokenization

Designed a classification system to analyze CVs using Decision Trees and NLP tokenization techniques, streamlining the candidate screening process.
