SUMMARY

Results-driven AI Engineer with expertise in building scalable, intelligent applications. Adept at leveraging LLMs, RAG, and multi-agent workflows to deliver robust AI-powered APIs and end-to-end machine learning solutions.

EXPERIENCE

03/2026 - Present AI&ML Engineer

Faisalabad, Pakistan **Paklogics**

- Develop AI solutions leveraging RAG pipelines and intelligent workflow orchestration.
- Build and integrate AI-driven features to solve real-world problems and enhance application capabilities.

07/2025 - 09/2025 ML Intern

Remote **DeveloperHubCorporation**

- Engineered scikit-learn predictive models on real-world datasets across the end-to-end ML development lifecycle

02/2025 - 08/2025 Backend Developer

Remote **DK Recruitment**

- Developed web applications and scalable REST APIs using Django and FastAPI

EDUCATION

09/2023 - Present BS Artificial Intelligence

Faisalabad, Pakistan **National Textile University**

SKILLS

AI & Machine Learning

AI & LLMs, RAG, NLP, Computer Vision, Predictive Modeling, Time-Series ML, Model Integration

LLM & Agentic AI

LangChain, LangGraph, CrewAI, Multi-Agent Systems, RAG Pipelines

Programming & Frameworks

Python, FastAPI, Django, REST APIs, Scikit-learn

Automation & Data

n8n, Clay, Supabase, SQL, Pandas, NumPy

Tools & Version Control

Git, GitHub, VS Code, Jupyter Notebook

PROJECTS

A/O Levels Exam Prep Platform

Proprietary — code not public

- Built AI-powered APIs using FASTAPI for structured exam-paper generation and automated evaluation; developed an OCR pipeline for mathematics papers and an exam-prep chatbot for a live student-facing platform.

AI Marketing Content Engine

github.com/AbdullahbinTahir42/crew_ai/tree/master/markintng-crew

- Created a multi-agent system that automates marketing workflows, with agents collaborating to research topics, develop content strategies, and draft SEO-optimized posts.

Breast Cancer Detection (Fine-Tuned ResNet50)

github.com/AbdullahbinTahir42/Mammographic_using_ResNet50

- Fine-tuned ResNet50 for mammogram-based breast cancer detection using the King Abdulaziz University dataset; achieved 84.5% accuracy, 0.97 AUC, and 83.6% recall across 5-fold cross-validation.

AI News Analysis Tool

github.com/AbdullahbinTahir42/EquityNewsSearchTool

- Built a RAG pipeline enabling natural-language Q&A over article URLs to retrieve and synthesize context-aware insights from news sources.

Prospect Automation (Clay, n8n, Supabase)

Proprietary — code not public

- Built an automation pipeline to identify target prospects and deliver personalized web pages at scale.

Autonomous Voice AI Assistant

<https://github.com/AbdullahbinTahir42/AIVoiceAutomationAgent>

- Built an autonomous voice AI assistant using LangGraph and FastAPI, integrating local LLM inference, GPU-accelerated speech recognition, neural TTS, dynamic tools, and persistent task memory.
